SmartModular	USB-IF Hi-Speed 2.0	512
Transcend	JetFlash	128
Transcend	JetFlash	256
Transcend	JetFlash	512

The USB Flash Memory drive can be used in place of the Zip Drive Dataloader. The USB Flash Memory drives listed above are fully tested by Avidyne engineering and will work with your EX5000 after it has been updated to Release 6. Avidyne cannot guarantee that other USB Memory Devices will work with Release 6 and strongly suggests that you use one of the Avidyne tested and approved drives listed above. Avidyne recommends that you dedicate an Avidyne approved USB Flash Memory Drive solely for data transfer to and from your EX5000, and not mix usage of this Flash Memory Drive with other devices. The following data that can be uploaded or downloaded utilizing the USB Flash Memory Drives:

- Jeppesen NavData
- CMax™ Chart Data (Minimum of 256MB USB Flash Memory Drive required)
- EMax™ Total Engine Management Log Data

USB Flash Memory devices are limited to usage with one data load or download utility at a time. You can not operate the NavData, CMax™ and EMax™ utilities at the same time on the same device. The current Zip drive loader will still work normally with Entegra Release 6.
